E-mail enquiries: humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk
On Feb 21, 2000 this sequence version replaced gi:6983194.
During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission conly a small overlap as described above.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          HSJ100419 117757 bp DNA linear PRI Human DNA sequence from clone RP5-100419 on chromosome ESTs, STSs and GSSs, complete sequence.
left end of clone RPI1-500011 is at 24031 in this sequence. This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >=

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        503
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     443
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            559
                                                                                                                                                                                                                                                                                                                                                                                 where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

Em: PMBL; Sw: SWISSPROT; Tr: TREMBL; Wp: WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 20, constructed by the Sanger Centre Chromosome 20 wapping Group. This sequence is the entire insert of clone RP5-1187J4 The true
left end of clone RP11-37D19 is at 62286 in this sequence. The
left end of clone RP11-37D19 is at 100 in this sequence. This
sequence was finished as follows unless otherwise noted: all
regions were either double-stranded or sequenced with an alternate
chemistry or covered by high quality data (i.e., phred quality >=
30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by at least
one plasmid subclone or more than one M13 subclone; and the
assembly was confirmed by restriction digest. RP5-1187J4 is from
the laborate of the confirmed by restriction digest. RP5-1187J4 is from

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         misc_feature
requests: clonerequest(sanger.ac.uk)
On Jun 5, 2000 this sequence version replaced gi:8017404.
During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:
Em: EMBL; Sw: SWISSPROY; Tr: , TREMBL; Wp:, WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 20, constructed by the Sanger Centre Chromosome 20 mapping Group. Further information can be found at http://www.sanger.ac.uk/HGP/Chr20
IMPORRANT: This sequence is not the entire insert of clone RP1-49G10 It may be shorter because we sequence overlapping sections only once, except for a 100 base overlap.
The true left end of clone RP5-1187J4 is at 161494 in this sequence. The true right end of clone RP5-1187J4 is at 161494 in this sequence. The sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                989

The LSG has high level of tissue specificity and is overexpressed in cancerous tissues. The sequence serves diagnostic marker for detecting, monitoring, staging and progno lung cancer. The diagnosis involves comparing levels of LSG in obtained from patient and normal control.

                                                                                                                                                                                                                                                                                                                                      The present sequence represents a human lung cancer specific gene (LSG), and encodes a polypeptide designated ingl03. LSGs are useful in the treatment and diagnosis of lung cancer. The treatment of lung cancer comprises the administration of a molecule which down regulates the expression of an LSG. An immune response can be mounted against a target cell expressing an LSG. Identification of potential therapeutic agents for use in imaging and treating lung cancer which comprises screening molecules for an ability to bind to or decrease expression of an LSG relative to LSG in the absence of the agent where the ability of a molecule to bind to the LSG or decrease expression of the LSG is indicative of the molecule being useful in imaging and treating lung

                                          Sequences AAZ87205-Z87210 represent cDNAs encoding six human concurrent concerns associated proteins (NTAPs, AAY77121-Y77126). The present sequence, clone 2799056, encodes a putative odorant-binding correction, and was produced by extension of cDNA fragments isolated from a comman nasal polyp tissue cDNA library. The NTAPs are used for treatment correvention of neurological diseases (e.g., Alzheimer's, Parkinson's correction of cDNA library. The NTAPs are used for treatment corrections and the sequences of the correction of the 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            В

AAA37022 to AAA37144 encode the new isolated human transmembrane, receptor or secreted PRO polypeptides given in AAY99340 to AAY9946 transmembrane and receptor PRO proteins can be used for screening potential peptide or small molecule inhibitors of the relevant receptor/ligand interactions. The polypeptides and nucleotide sequencoding then have various industrial applications, including uses
                                                                                                                       New mammalian DNA sequences encoding transmembrane, secreted PRO polypeptides, useful for screening of psmall molecule inhibitors of the relevant receptor/
                                                                                                                                                                                                                                                                   980S-0104987

Novel nucleic acids encoding PRO polypeptides, used to diagnose the presence of tumours, such as prostate and breast tumours, in mammals to screen for modulators of the compounds and

Claim 2; Fig 279; 774pp; English.

Sequences AAS45925-AAS46231 represent DNA molecules encoding and PCR CC primers for PRO polypeptides of the invention. The sequences of the invention can be used to detect the presence of a tumour in a mammal by CC comparing the level of expression of a PRO polypeptide in a test sample CC of cells from the animal and a control sample of normal cells, whereby a CC higher level of expression in the test sample indicates the presence of a CC tumour in the mammal. Mammals include dogs, cats, cattle, horses, sheep, CC used to stimulate tumour necrosis factor (TNF) alpha release from human CC blood, when contacted with it. A specific polypeptide can be used to stimulate the proliferation or differentiation of chondrocyte cells. The CC susceptibility to tumour development, particularly adrenal, lung, colon, CC susceptibility to tumour development, particularly adrenal, lung, colon, CC susceptibility to tumour development, particularly adrenal, lung, colon, CC susceptibility and can be used to determine the presence of tumours and also consest, prostate, rectal, cervical, or liver tumours, in mammalian cCC can be used for genetic analysis of individuals with genetic disorders.

                                                                                                                           The present invention relates to secreted and transmembrane proteins. These proteins and the DNA encoding them may be used as hybridization probes, in chromosome and gene mapping and in the generation of anti-sense RNA and DNA. They may also be used to generate either transgenic animals or knockout animals which are in turn useful for development and screening of therapeutically useful reagents. The nucleic acids may also be used in gene therapy.
                                                                                                                                                                                                                                     Secreted a
